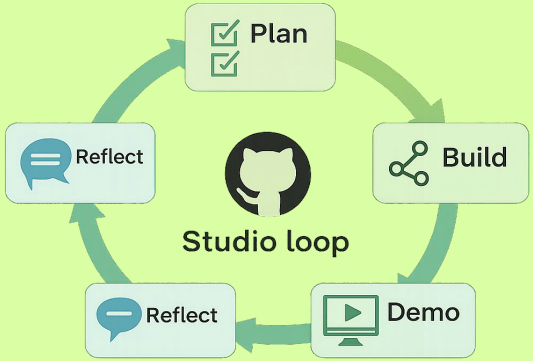
Welcome to Capstone Design (Spring 2026)

MArch 04, 2026

- This is a studio, not a lecture
- We ship weekly, we demo weekly
- GitHub is the source of truth



Introduction

1. Form teams
2. Get a project idea approved
3. Create your GitHub foundation
4. Early finish = when everyone hits the exit checklist

Today’s Goal (and why we might end early)

- GitHub is the source of truth
- If it isn’t linked, it didn’t happen
- One weekly team submission (Sprint Packet Issue)

The Big Rules (keep it simple)

- This is a studio, not a lecture
- We ship weekly, we demo weekly
- GitHub is the source of truth

What You're Building This Semester

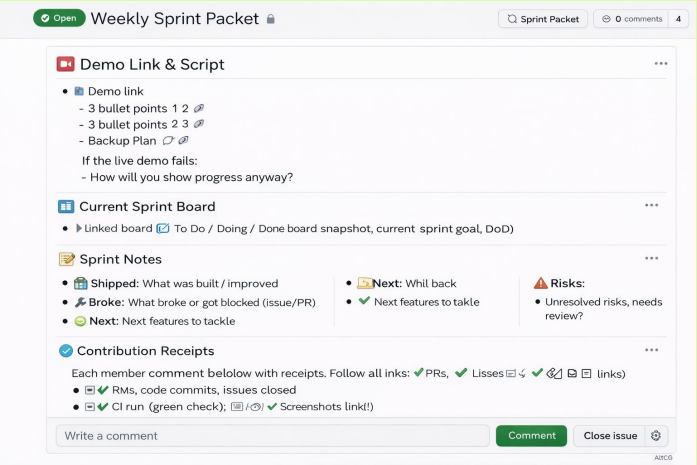
- Wednesday: assign + build in class
- The Week: questions get answered / unblock
- The following Friday: prior week Sprint Packet due (team submission)

Weekly Rhythm (Friday rule)

- Specs + bundles (meet the spec, get the credit)
- Revision windows (improvement-only)
- Missed work is still required, but stays zero

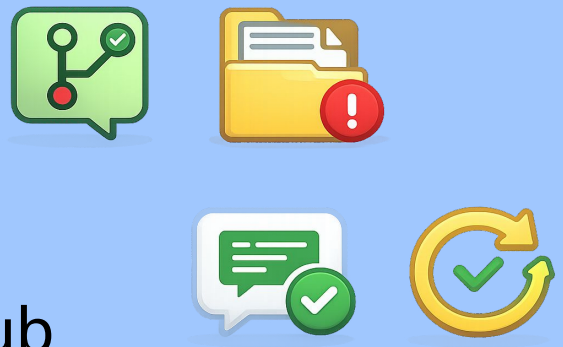
Grading for Growth (the vibe)

- Demo link + 3-bullet script + backup plan
- Board snapshot (To Do / Doing / Done + owners + DoD)
- Notes: shipped / broke / next / risks
- Everyone comments with receipts



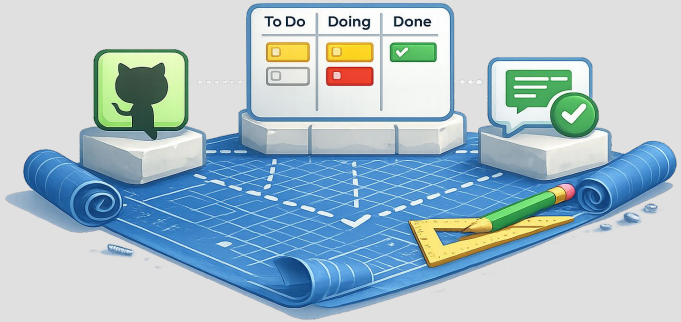
The Weekly Sprint Packet (what to submit)

1. PR you opened/merged
2. Issue you opened/closed
3. Review comment you left
4. CI run link
5. Screenshot attached inside GitHub (when needed)



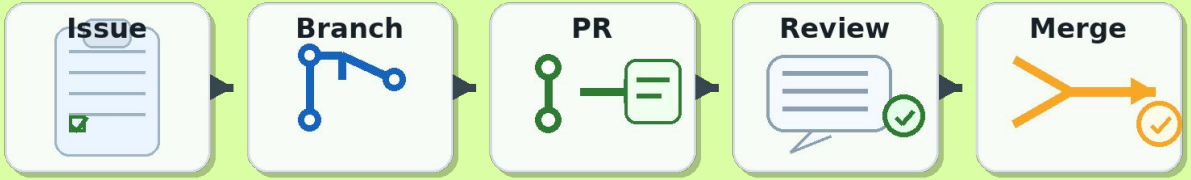
What Counts as a “Receipt”

- Repo created (or assigned)
- Project board created
- “Idea Approval” Issue created
- Week 1 Sprint Packet Issue created



Today’s Setup Deliverables (team)

- Issue (with Definition of Done)
- Branch
- PR (links the Issue)
- Review
- Merge

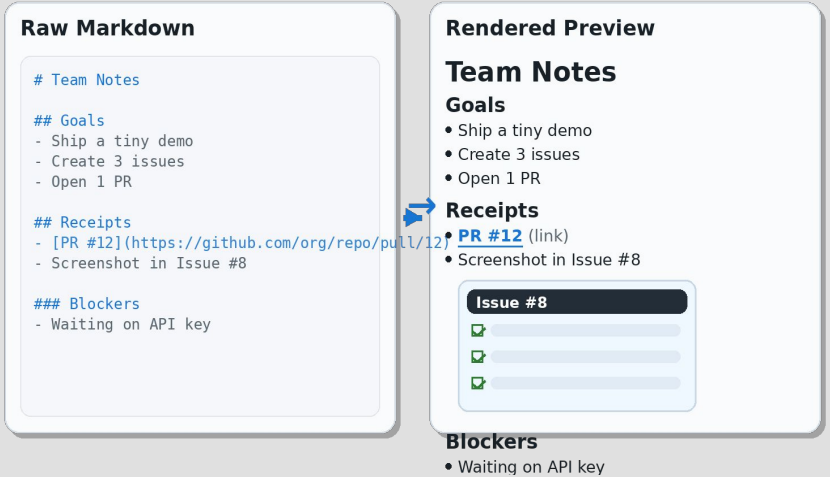


GitHub Workflow (how we work every week)

1. Watch once
2. Then you do it

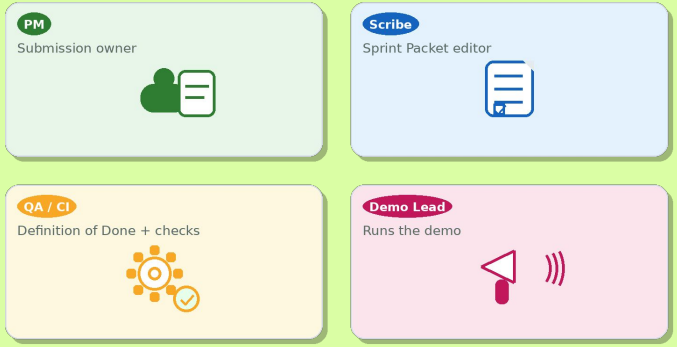
Live Demo: Issue → PR → Merge

- Headings, bullet lists, checklists
- Links (receipts)
- Screenshots in Issues



Markdown Basics (only what you need)

- Teams are self-selected (with instructor help)
- Roles (rotate weekly):
  - PM (submission owner)
  - Scribe (Sprint Packet editor)
  - QA/CI (definition of done + checks)
  - Demo lead (runs the demo)



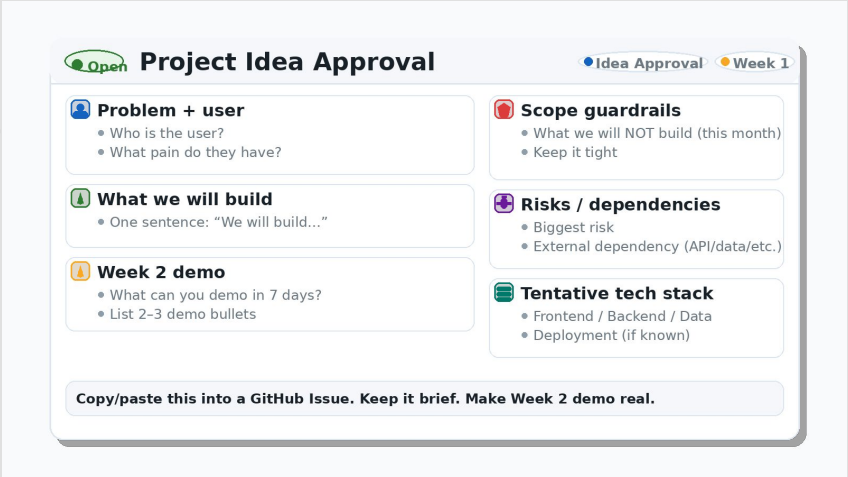
Rotate roles weekly

Teams + Roles (for sanity)

- You can demo something real by Week 2
- You're not blocked on external miracles
- Scope is reasonable for the semester

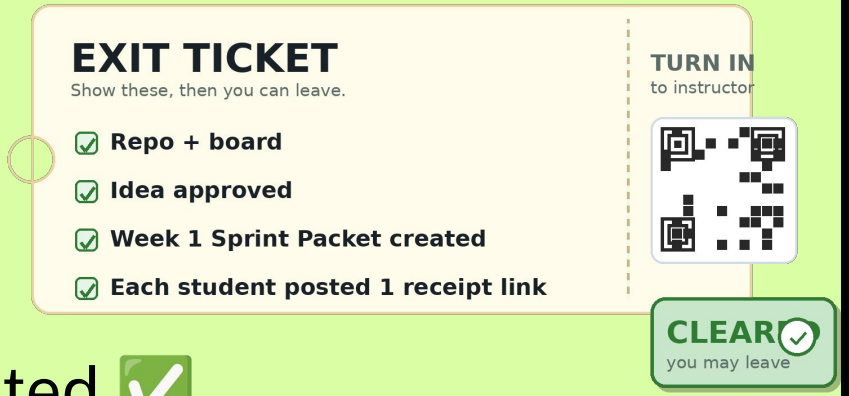
Idea Approval: What I'm Looking For

- Problem + user
- What we will build (1 sentence)
- Week 2 demo
- Scope guardrails (what we will NOT build)
- Risks / dependencies
- Tentative tech stack



Idea Approval Issue Template (copy/paste)

- Repo + board ✅
- Idea approved ✅
- Week 1 Sprint Packet Issue created ✅
- Each student:
  - At least 1 receipt link posted ✅



Exit Checklist (leave early when done)

1. Fill Sprint Packet sections
2. Close at least 1 Issue via PR
3. Everyone posts 2–3 receipts (minimum standard)

Sprint Packet due (team submission)

What to Do Next (after class)

- Questions now
- Then build time

Q&A + Team Work Time
